

ADVANCED CYBER SECURITY THREAT PROTECTION

Are You Concerned About Ransomware?

We'll provide organizations with a multi-layered, defense-in-depth approach to protect against hackers, ransomware and even rouge or careless employees.

*2 in 5 businesses report
a breach every 5 years*

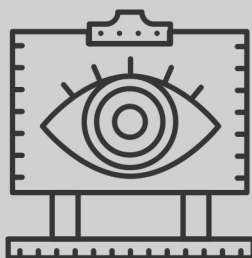

How It Protects Your Network

Analyzes Logs

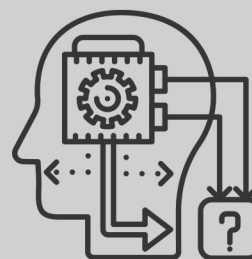

Artificial Intelligence (AI) collects data to identify fraudulent activity, security incidents and policy violations.

Monitors Alerts

In-house cyber security experts receive real-time notifications when important threats occur.

Takes Action

If a threat has been found, the system automatically takes action to stop the threat from moving forward.

On-Going Reporting

Both forensic and compliance reporting are important tools for every organization to have. Simplify the

auditing process with built-in compliance monitoring and reporting. Plus, know what employees are doing with a detailed report of users' actions on the network.
