**NEW ADVANCED EMAIL SECURITY SOLUTION PROTECTS  
AGAINST PHISHING ATTACKS AND EMAIL IMPERSONATION**

**Robertsdale, AL (April 8, 2022)** – Business Information Solutions, Inc. (BIS), the leading technology and cybersecurity firm on the Gulf Coast, announces a new, advanced email security platform to combat phishing attacks and email impersonation.

In 2020, 75% of organizations experienced a phishing attack. These numbers continue to rise as hackers find creative ways to infiltrate networks. This type of threat is extremely detrimental to industries storing sensitive data or handling financial information or wire transfers.

With Rampart Secure Email, businesses get an affordable solution that provides anti-spoofing, advanced threat protection, email monitoring, email encryption, DNS Management, and end user security training. Phillip Long, resident Certified Information Systems Security Professional (CISSP) and CEO of BIS, partnered with the best security vendors in the world to create a custom package that thwarts cyber threats using a multi-pronged approach.

“I’m very excited to offer Gulf Coast businesses this new, advanced email security solution,” said Long. “We’ve been seeing an uptick in email threats, especially from Russia since the invasion of Ukraine. In the past, the responsibility to detect phishing emails and impersonators was on the end-user, which ultimately led to a data breach as they were not properly educated on cyber threats. This solution takes the person out of the equation altogether and relies on state-of-the-art intelligence to identify and stop email threats in real-time. Paired with enterprise-grade encryption and advanced threat protection, you have a robust email security platform at an affordable price for any size organization.”
