Phillip Long, CEO of Business Information Solutions, Earns Certified Ethical Hacker Certification

Robertsdale, AL – Business Information Solutions (BIS), a leading provider of IT support and cybersecurity services on the Gulf Coast, proudly announces that CEO Phillip Long, CISSP and CMMC-certified, has recently achieved the prestigious Certified Ethical Hacker (CEH) certification. This milestone underscores his dedication to staying ahead of evolving cyber threats and equipping businesses with robust defense strategies.

The CEH certification, recognized worldwide, equips professionals with the tools and knowledge to think like cybercriminals. Ethical hackers learn the latest techniques used by malicious actors to infiltrate organizations, allowing them to develop proactive strategies to strengthen cybersecurity defenses.

Phillip Long's achievement highlights his commitment to helping businesses protect themselves in an ever-changing threat landscape. Long stated, "The best defense is a great offense. You want to know what the bad guys are doing so you can defend against it."

Armed with this certification, Long and the BIS team can conduct penetration tests that simulate hacker behavior. By identifying vulnerabilities within an organization, they provide tailored solutions to mitigate risks, ensuring businesses on the Gulf Coast remain secure and resilient.

Since its founding in 2001, Business Information Solutions has been a trusted partner for businesses, delivering comprehensive IT support and cutting-edge cybersecurity services. Long's latest achievement reaffirms BIS's commitment to staying at the forefront of technology and security trends.
